CELLPHONE-MATE, INC. ANNOUNCES FIRST FCC APPROVED 4G LTE  
BAND BIDIRECTIONAL AMPLIFIER, THE CM700V

*Follows the CM2100, 4G AWS (Advanced Wireless Service) Amplifier introduced in March  
2011, making Cellphone-Mate the most complete 4G cellular amplification provider*

**Fremont, Calif., July 5, 2011**---Cellphone-Mate ([www.Cellphone-Mate.com](http://www.Cellphone-Mate.com)) a leading provider of cell phone amplifiers and accessories, today announced that it is now taking orders for the industry's first and only aftermarket FCC Approved, 4G LTE band bidirectional amplifier, the [SureCall® CM700V 70dB](#) and will begin shipping product full-scale in late July.

With cellular amplifiers built specifically for the LTE network, Cellphone-Mate is the only company that currently supplies aftermarket amplifiers, antennas, splitters and couplers for both the North American LTE and AWS technologies and frequencies, following in the wake of their [SureCall® CM2100 AWS](#) amplifier solution introduced in March of 2011.

Designed to work with the Verizon network, the largest cellular carrier in North America, this in-building amplifier complements the two external and two internal full-band antennas the company is currently shipping for the LTE network. Each of these full-band antennas work with all carriers in North America -- for all cellular frequencies -- and with all generations of technology including 2G, 3G and 4G.

“Our new SureCall CM700V amplifiers, combined with our full-band antennas and accessories, will greatly improve data and voice service for businesses and homes on the Verizon LTE network,” said Hongtao Zhan, Cellphone-Mate CEO. “This LTE amplifier positions Cellphone-Mate as the most complete 4G cellular amplification solution. We pride ourselves on being first-to-market in the evolution of 4G connectivity.”

Testing has shown that the 4G LTE amplifier system will consistently provide 4G service in areas not available previously. While Cellphone-Mate's new amplifiers work with LTE and AWS, its product lines of antennas, splitters, and couplers, also work with all cellular bands in North America, including Cellular, PCS, and the Wi-Max band.

Like all its products, the 4G LTE amplifier will be covered by Cellphone-Mate's industry exclusive two-year manufacturer's warranty. All Cellphone-Mate products are available from its network of authorized resellers and distributors.
